The Central Ohio Raingage Network (CORN) is an organization of volunteer precipitation observers ... the following organizations have recruited representative members: EMH&T, Inc.; Ohio Department of Natural Resources (ODNR); DLZ, Ohio, Inc.; U.S. Geological Survey / Water Resources Division; Burgess & Niple, Ltd., and Nisource. The CORN report is published monthly by Bob Davis and Mindy Wells of EMH&T, Inc., in Columbus, Ohio.

#### **Notes:**

1. Daily precipitation totals shown on previous pages for Gages 1-10, 12-102, and 117-208 are for those volunteers who report directly to Bob Davis of EMH&T, Inc. Data shown in italics for remaining gages represent information supplied by National Weather Service Cooperative Observers. Daily totals presented for several of these observers have been obtained from National Weather Service web sites. For possible daily totals of other gages in network, contact Dave Cashell or Scott Kirk at ODNR / Division of Water.
2. Daily precipitation measurements shown on previous pages are typically taken from plastic rain gauges of at least 5-inch capacity.
3. "Station I.D." nomenclature is adapted from National Weather Service procedure for naming Cooperative Observer stations. The station is identified either by the nearest community or well-known landmark, along with a distance in miles, and direction from that community or landmark, if it exceeds approximately one mile. For example, Marion 2N represents a site that is approximately 2 miles north of the City of Marion. If no distance or direction is included with the Station I.D., the station is located within the community, or less than one mile from the identified landmark.
4. Information shown in italics represents information from National Weather Service Cooperative Observer sites.
5. Gage ID numbers from 201-208 represent volunteers whose gages are located outside of the 10-county area officially designated by the NWS as the "Central Ohio" climatic section.
6. Data for Gages 77, 105, 111, and 115 were not available at the time of publication.
7. Because of the isolated nature of many of the storms and downpours that occurred during May, no attempt has been made to check volunteer data this month. Most of the data provided in this report is published as received from the volunteers.

### SUMMARY INFORMATION for May 2006

Precipitation averaged below normal over all 4 sectors of our network during May. Monthly precipitation totals at individual stations ranged from 2.13 inches at Commercial Point in northwestern Pickaway County, and 2.14 inches at Rathbone in southwestern Delaware County to 5.30 inches at Blacklick Woods 2NNE in eastern Franklin County. Outside of our official 10-county network, North Zanesville reported 6.60 inches, and South Zanesville reported 6.20 inches of rainfall during May. Monthly totals are somewhat skewed by significant rainfall that started during the afternoon of the 31<sup>st</sup>, and was not reported by volunteers who record their daily totals in the morning. Sector averages for the month were as follows: NW = 3.69"; NE = 3.49"; SE = 3.79", and SW = 3.17". The 4-sector average for the month was 3.53 inches; normal precipitation for May at Port Columbus is 3.88 inches. The most significant rainfall of the month fell during the period of May 10-19.

During the 10-day period of May 10-19, many of our volunteers reported measurable rainfall on every day of that period. From late afternoon on the 10<sup>th</sup> to early morning on the 16<sup>th</sup>, the area was affected by a nearly stationary low pressure center that brought generally scattered light rain showers to our area. This is the same system that produced flooding rains over New England during the same period. Up to 17 inches of rain fell over portions of the New England area, producing some of the worst flooding in that area since 1936. The most significant period of rain for the Central Ohio area came from late afternoon on the 17<sup>th</sup> to late afternoon on the 18<sup>th</sup>, with the passage of a cold front. Over the 10-day period, the total rainfall ranged from about 1.4 inches to 4.3 inches, with the heaviest amounts generally reported from the southern half of Franklin County, and also in the Zanesville area.

Precipitation for calendar year 2006 is now averaging slightly below normal for the northern half of our network, and slightly above normal for the southern half. Annual totals at individual stations range from 10.67 inches at Hunter's Ridge Shopping Center in Gahanna (eastern Franklin County) to 21.25 inches at Lithopolis in northwestern Fairfield County. Sector averages for the year are as follows: NW = 13.89"; NE = 14.15"; SE = 16.21", and SW = 15.04". The 4-sector average for the year is 14.82 inches; normal precipitation for the period of January through May at Port Columbus is 14.75 inches. The Palmer Drought Severity Index for the central Ohio area remained in the "near normal" category at the end of May, and pool levels were in good shape at all of the Columbus area water supply reservoirs for the beginning of the summer season.
